

```
. sampsi 0.032 0.096, power(0.8) alpha(0.05) onsample
```

Estimated sample size for one-sample comparison of proportion  
to hypothesized value

Test  $H_0: p = \mathbf{0.0320}$ , where  $p$  is the proportion in the population

Assumptions:

alpha =	<b>0.0500</b>	(two-sided)
power =	<b>0.8000</b>	
alternative p =	<b>0.0960</b>	

Estimated required sample size:

n =	<b>86</b>
